

Fork Positioner for Forklifts

Forklift Fork Positioner - A fork positioner is actually a tool made out of top quality materials meant to be able to endure the most demanding procedures and work environments. This particular piece of equipment enables the person driving to be able to control the blades hydraulically without leaving the seat. Side shifting models have the added ability to be able to laterally position the entire load or the arms in order to facilitate much more exact lifting and placement in a quicker and more effective manner.

The only one of its kind blade pocket design can enable operators to be able to securely swing the unit's forks without any fear of destroying the positioning cylinders. This allows the worker the option to either perform independent or simultaneous fork movement, dependent upon the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are required. Standard OEM carriages can be converted into blade positioners on available units.
